**DETAILED ACTION**  
**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Nathan J. Witzany, Reg. No. 69,948 on, June 18, 2008.

The application has been amended as follows:

**In the claims:**

Mr. Nathan J. Witzany stated that accidentally the added part to the claim 9 has not been underlined. Thus, the current version of claim 9 would be marked up as follows:

9. (Currently Amended) An access control method as claimed in claim 2, ~~including invoking sequentially the levels of access control depending on the number of failed attempts to verify said identification data by said user for access requests over predetermined periods of time~~ wherein said blocking involves denying all access requests that include address data or said unique identification number that corresponds to said data processing apparatus.

***Allowable Subject Matter***

1. Claims 1-28 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The primary reasons for the allowance of the independent claims 1, 10, 14 and 18 are the inclusion of limitations that are not found in the prior arts and they are uniquely distinct features. The closest prior art is Guthrie et al (6,161,185). Guthrie discloses a computer system to provides numerous security and utility features. Users employ a password that does not change each time a user authenticates with a server. As a result, users can remember their passwords more easily. The exemplary embodiment automatically locks out a user for a time out period where the user has attempted authentication for a predetermined number of successive attempts and failed. As the number of authentication failures increases, the time out period increases. User passwords expire after a predetermined period of time, thereby requiring users to change their passwords.

However, this art fails to anticipate or render the following limitations:

"Claim 1: including invoking sequentially the different levels of access control depending on the number of failed attempts to verify said identification data by said user for access requests over predetermined periods of time."

"Claim 10: at least one additional level of access control includes sending communication software to said apparatus to receive access requests for said service under an additional communication protocol and wherein said detecting is a second

level of access control, and said sending of said communication software and execution of said additional communication protocol is a third level of access control.”

“Claim 14: invoking a third control level requiring use of predetermined download software for transmitting said access requests and attempting to verify said user; invoking a fourth control level blocking access to said service on the basis of at least one communications address corresponding to said access requests; and invoking said control levels sequentially depending on a number of failed attempts to verify said user; wherein attempting to verify said user comprises sending unique identification data to said user, receiving identification data from said user in response to the sent identification data, and verifying the received identification data.”

“Claim 18: an access control server for receiving access requests for a service from a data processing apparatus, rate limiting access to the server, using an access request queue, until a user of said apparatus is verified, and sending to said data processing apparatus unique identification data; and an interactive voice response system for contacting an independent communications device having an association with said user and said data processing apparatus, issuing a request for said identification data, and providing the identification data received from said user in response to said request to said access server in order to verify said user.”

3. The dependent claims 2-9, 11-13, 15-17 and 19-28 are allowed because they were originally found to include a unique feature not found in the closest abovementioned art.

***Conclusion***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
